TITLE : REMOTE CONTROL DEVICE

ABSTRACT : PURPOSE: To make it possible to write a new ID code in a receiver in a safe manner when an ID code of a transmitter does not conform with that of a receiver.

CONSTITUTION: A first transmitter for transmitting an ID code and a second transmitter for transmitting a registered code are provided. A receiver 3 has a memory 24 for storing the ID code and a memory 25 for storing the registered code. In order to replace the ID code of the receiver 3, a registered code is transmitted from the second transmitter to the receiver. When the signal received by the receiver conforms with the registered code stored in the memory 25, the receiver erases the ID code of the memory 24. Next, a new ID code transmitted from the first transmitter is stored in the memory 24.
